

**QUESTIONS AND ANSWERS ABOUT
PRECISION LAYOUT SERVICE
FROM D.H. ROBERTS CONSTRUCTION**

Q: What is Precision Layout Service?

A: Precision Layout Service is a construction staking system used to ensure that your project is built in the right place, at the right elevations and at the right angles.

Q: How does the Precision Layout Service work?

A: Using a Topcon GTS-105n Electronic Total Station, P.L.S. utilizes a reflected laser beam to measure distances and angles, accurate to ¼" in 100 yards!

Q: What can I use the Precision Layout Service to layout?

A: P.L.S. can layout entire buildings, cut/fill grades, elevations, complex shapes or designs, offsets, or anything that needs to go on or in the ground.

Q: Do I have to give Precision Layout Service pre-engineered coordinates?

A: Using our CAD program, P.L.S. can use your prepared drawings to plan and perform your layout, or create a plan from scratch to suit your needs and ideas.

Q: Someone else is doing the construction. Will you still do the layout?

A: While D.H. Roberts Construction is a start-to-finish general contractor, specializing in concrete foundations and walls along with steel building erection, Precision Layout Service will work with any contractor or private firm to help them complete your project.

Q: How much does it cost?

A: A competitive hourly rate applies to smaller jobs and to those being run by other general contractors. Larger jobs can be quoted on a per job basis. Precision Layout Service is included FREE with the purchase/installation of a building or concrete work from D.H. Roberts Construction.

Q: How do I get started?

A: Contact D.H. Roberts Construction today at **(517) 849-7236** and ask for Frank Engle, our Precision Layout Service specialist.
